

PUBLIC RI REPORT

2021 PILOT

UBS Asset Management

Generated 2022-08-18

About this report

The PRI Reporting Framework helps to build a common language and industry standard for reporting responsible investment activities. **Public RI Reports** provide accountability and transparency on signatories' responsible investment activities and support dialogue within signatories' organisations, as well as with their clients, beneficiaries and other stakeholders.

This **Public RI Report** is an export of the signatory's responses to the PRI Reporting Framework during the 2021 reporting period. It includes the signatory's responses to mandatory indicators, as well as responses to voluntary indicators that the signatory has agreed to make public.

The information is presented exactly as it was reported. Where an indicator offered a multiple-choice response, all options that were available to select from are included for context. While presenting the information verbatim results in lengthy reports, the approach is informed by signatory feedback that signatories prefer that the PRI does not summarise the information.

Context

In consultation with signatories, between 2018 and 2020 the PRI extensively reviewed the Reporting and Assessment processes and set the ambitious objective of launching in 2021 a completely new investor Reporting Framework, together with a new reporting tool.

We ran the new investor Reporting and Assessment process as a pilot in its first year, and such process included providing additional opportunities for signatories to provide feedback on the Reporting Framework, the online reporting tool and the resulting reports. The feedback from this pilot phase has been, and is continuing to be analysed, in order to identify any improvements that can be included in future reporting cycles.

PRI disclaimer

This document presents information reported directly by signatories in the 2021 reporting cycle. This information has not been audited by the PRI or any other party acting on its behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented.

The PRI has taken reasonable action to ensure that data submitted by signatories in the reporting tool is reflected in their official PRI reports accurately. However, it is possible that small data inaccuracies and/or gaps remain, and the PRI shall not be responsible or liable for such inaccuracies and gaps.

Senior Leadership Statement (SLS)

Senior leadership statement

Our commitment

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	
SLS 1 S1	CORE	N/A	N/A	PUBLIC	Our commitment	GENERAL

- o **Why does your organisation engage in responsible investment?**
- o **What is your organisation's overall approach to responsible investment?**
- o **What are the main differences between your organisation's approach to responsible investment in its ESG practice and in other practices, across asset classes?**

UBS's goal is to be the financial provider of choice for clients wishing to mobilize capital towards the achievement of the U.N. SDGs and the orderly transition to a low carbon economy (the Paris Agreement). We believe Sustainable and Impact Investing (SI) can result in better overall risk-adjusted outcomes for clients by primarily helping protect against downside risks associated with ESG-related issues. By identifying long-term investment opportunities, anticipating and managing financially material risks, engaging with relevant third parties, and creating products and services that take into account ESG considerations, we believe our investments will be more successful in the longer-term, positively impacting society and the environment.

Our firm's common vision on the integration of ESG material factors in investment decisions, index constructions in the case of index strategies, and stewardship are set out in our SI policy. As a large scale asset manager, we provide traditional, alternative, real estate, infrastructure and private equity investment solutions to private clients, financial intermediaries and institutional investors worldwide. With several investment areas and a range of strategies within each, the approach to ESG issues necessarily varies by product type and, to some extent, across countries/regions according to local regulations, market customs and client needs.

Across our traditional active businesses, ESG is fully integrated. Within index equities and fixed Income, we have extensive experience and expertise in incorporating sustainability factors in index funds and rules-based strategies. Our Real Estate and Private Markets business incorporates SI into all of their investment processes and will be among the first managers to offer funds that promote sustainability under the EU Sustainable Finance Disclosure Regulation. Within the multi-asset business, different methodologies of ESG assessment are combined into one portfolio, making it challenging to create one overarching profile of the ESG characteristics. We integrate sustainability where possible, leveraging best practices. Our multi-manager funds, traditional and alternative, include aspects of ESG into the manager due diligence process and use SI topics for new product development.

Investment teams drive ESG integration within their investment processes and engagement activities linked to value drivers. Portfolio managers and analysts have access to a variety of ESG data, internal and external. They are supported by the SI team, a global team of sustainability experts dedicated to research, stewardship (proxy voting and engagement activity), SI reporting, and product innovation.

Annual overview

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
SLS 1 S2	CORE	N/A	N/A	PUBLIC	Annual overview	GENERAL

- o **Discuss your organisation’s progress during the reporting year on the responsible investment issue you consider most relevant or material to your organisation or its assets.**
- o **Reflect on your performance with respect to your organisation’s responsible investment objectives and targets during the reporting year. This might involve e.g. outlining your single most important achievement, or describing your general progress, on topics such as the following:**
 - o **refinement of ESG analysis and incorporation**
 - o **stewardship activities with investees and/or with policy makers**
 - o **collaborative engagements**
 - o **attainment of responsible investment certifications and/or awards**

Notwithstanding the considerable challenges brought about by the COVID-19 pandemic in 2020, we continue to regard the long-term threats posed by climate change as one of the most serious investment risks facing our clients and their beneficiaries. During 2020 we delivered on our commitment made at the WEF annual meeting in Davos at the start of the year to provide clients with a range of investment products across asset classes which can help them transition their assets towards a lower carbon future. Building on our innovative Climate Aware methodology we launched new climate investment strategies across both active and passive equity and fixed income six months later. By December 2020, AuM across our climate strategies had risen five-fold to over USD15bn, representing a significant contribution of capital towards the efforts to generate positive climate outcomes. This commitment was underscored at the end of the year when we became a founding signatory to the Net Zero Asset Managers initiative.

We remain committed to the Climate Action 100+ investors coalition, leading on eight collaborative engagements and participating in a further 29 during 2020. Our own three year thematic climate engagement program concluded at the end of 2020, with good progress against our engagement objectives being recorded in over half of all cases. We will be publishing a full review of the program in mid-2021. With regard to our climate stewardship activities, we were very gratified to be ranked in the ‘A’ band by Influence Map in 2020. During the year, our ongoing climate commitment was further strengthened in the alternatives space, with the launch of our an environmentally focused long short hedge fund strategy.

We are also committed to furthering the advancement of SI, particularly through our advocacy activities. As a firm, it is our ambition to support the development of regulatory standards and guidelines globally and employ progressive and innovative solutions to meet those standards. During 2020, we engaged on a range of topics with a focus on sustainable investing (SI), in addition to participating in several working groups and initiatives aimed at enhancing standard setting, both on emerging and consolidated ESG topics. These included various legislative initiatives under the EU's Action Plan on Sustainable Finance as well as proposals by the US Department of Labor (DOL) for US pension plans on SI and proxy voting. UBS also provided input to the Swiss State Secretariat for International Finance (SIF) on the future Swiss sustainable finance framework and in Hong Kong, rules by the Securities and Futures Commission (SFC) on climate risk management. In response to the COVID-19 pandemic, we contributed to regional and international policymakers’ reviews of the March 2020 market constraints as a result of the pandemic. It is our view that asset managers and the markets have a key contribution to make to the COVID-19 recovery and we support approaches which facilitate this, including the role that specific funds play in the economy, and a recovery in line with SI objectives.

Next steps

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
SLS 1 S3	CORE	N/A	N/A	PUBLIC	Next steps	GENERAL

What specific steps has your organisation outlined to advance your commitment to responsible investment in the next two years?

We regard strong stewardship as one of the most critical ways of helping corporates transition their business models to a more sustainable future. We are broadening our thematic stewardship activities to cover Human rights, Biodiversity, Health and well-being and the Circular Economy, while expanding our existing climate engagement activities. We aim to ensure that 70% of our new product launches are sustainability focus or impact strategies. Client strategic engagement and partnerships will be enhanced by providing ESG analytics and sustainability outcomes reporting for all investment strategies, and we are committed to supporting SI knowledge through education, thought leadership and advocacy.

Endorsement

ESG in other asset classes

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
OO 34	CORE	Multiple, see guidance	N/A	PUBLIC	ESG in other asset classes	1

Describe how you incorporate ESG into the following asset classes.

Description

(B) Farmland – internal

Farmland - Internal

Our portfolios are enrolled in the Leading Harvest Farmland Management Standard, a newly developed ESG standard for farmland portfolios designed to optimize sustainable farmland management as part of a comprehensive assurance program. The Standard identifies sustainable farming practices based on 13 Principles, 13 Objectives, 33 Performance Measures and 71 Indicators. It addresses economic, environmental, social and governance issues and includes measures to efficiently use water, agricultural chemicals and energy to grow crops for useful agricultural products; minimize waste; and conserve soils, water resources and biodiversity.

It also takes into consideration the well-being of farmland tenants, employees, contract management company employees, contract farm labor and local communities. The Standard is designed to grow with agricultural operation over time, providing a framework for continuous improvement. Through the Standard's sound auditing assurance, we can confidently make claims to the market that our farm operation are achieving lasting outcomes for our clients, the communities in which we operate and growing a healthier future for generations to come..

(C) Other – internal

Multi-manager - Internal

Our due diligence process to appoint external managers incorporates qualitative and quantitative assessment. Our due diligence questionnaires ask for external managers' considerations of ESG risk in their research, portfolio construction and portfolio management process. Our Multi-Manager Solutions (MMS) team reviews and assesses managers' answers to these questions related to the specific mandates / funds we consider using the external managers for.

For mandates that are not sustainable-focused, we look for managers who do take ESG risk into consideration, but also alongside with other factors such as valuation, competition, as part of their investment decision making process, to achieve out-performance of a traditional benchmark, such as MSCI World Equity Index.

In evaluating sustainable focused strategies, the MMS team pays particular attention in its assessment of the managers' invested resources in the area of ESG, sustainable and impact investing. For example, does the firm have a team of research and investment personnel dedicated to ESG, sustainable and impact investing? What is the pedigree of the relevant investment personnel? What are the analytical and research tools used to assess companies' ESG risk, and what is the investment process to take into account of these risks in portfolio construction to deliver to the expected sustainability outcome?

Quantitatively, the MMS team will evaluate the ESG, sustainability and impact characteristics of the manager's portfolio, in addition to the standard quantitative assessment such as active risk, composition of active risk, and performance analytics compared to traditional benchmarks.

ESG, sustainability and impact characteristics will include, but not limited to, portfolio's overall ESG score compared to traditional benchmarks, carbon footprint and operational efficiency, natural resource utilization, pollution and waste management, etc. The MMS team will compare the manager's self-reported sustainability profile with UBS AM's sustainability framework, where appropriate, to gain additional perspective of the manager's ability to deliver to its stated sustainable objectives..

OO 35	CORE	Multiple, see guidance	N/A	PUBLIC	ESG not incorporated	1, 2
-------	------	------------------------	-----	--------	----------------------	------

(R) Externally managed: Private equity

The Portfolio Manager takes ESG integration into account when allocating to underlying strategies, including target funds. For underlying strategies managed by UBS-AM, the Portfolio Manager identifies ESG integrated assets resulting from the ESG integration research process described in the UBS-AM SI Policy. For externally managed strategies, ESG integrated assets are identified via the third party manager research process.

(S) Externally managed: Real estate

The Portfolio Manager takes ESG integration into account when allocating to underlying strategies, including target funds. For underlying strategies managed by UBS-AM, the Portfolio Manager identifies ESG integrated assets resulting from the ESG integration research process described in the UBS-AM SI Policy. For externally managed strategies, ESG integrated assets are identified via the third party manager research process.

(T) Externally managed: Infrastructure

The Portfolio Manager takes ESG integration into account when allocating to underlying strategies, including target funds. For underlying strategies managed by UBS-AM, the Portfolio Manager identifies ESG integrated assets resulting from the ESG integration research process described in the UBS-AM SI Policy. For externally managed strategies, ESG integrated assets are identified via the third party manager research process.

(U) Externally managed: Hedge funds

The Portfolio Manager takes ESG integration into account when allocating to underlying strategies, including target funds. For underlying strategies managed by UBS-AM, the Portfolio Manager identifies ESG integrated assets resulting from the ESG integration research process described in the UBS-AM SI Policy. For externally managed strategies, ESG integrated assets are identified via the third party manager research process.

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 1.2	PLUS	ISP 1	N/A	PUBLIC	Responsible investment policy	1

What mechanisms do you have in place to ensure that your policies are implemented in an aligned and consistent way across the organisation?

UBS's goal is to be the financial provider of choice for clients wishing to mobilize capital towards the achievement of the United Nation's Sustainable Development Goals (SDGs) and the orderly transition to a low carbon economy (the Paris Agreement). We work towards this goal by integrating sustainability into our mainstream offerings, through new and innovative financial products with a positive effect on the environment and society, and by advising clients on their philanthropy. And it is through the management of environmental and social risks, the management of our environmental footprint and our sustainability disclosure that we continue to set standards in the industry.

Our cross-divisional organization, UBS in Society, focuses our firm on this direction. UBS in Society is committed to making UBS a force for driving positive change in society and the environment for future generations. It will do so by focusing our firm on creating long term positive impact for clients, employees, investors and society. The Corporate Culture and Responsibility Committee (CCRC) supports the UBS Board of Directors in its duties to safeguard and advance the Group's reputation for responsible and sustainable conduct. It approves and monitors UBS in Society's overall strategy and annual objectives, reviews that the UBS in Society constitutional document is relevant and up to date, and oversees the program's annual management review.

The Group CEO supervises the execution of the UBS in Society strategy and annual objectives. The Group CEO also informs the Group Executive Board (GEB) and Corporate Culture and Responsibility Committee (CCRC) about UBS in Society updates as appropriate.

Our commitment is implemented through a firm-wide management system steered by defined measurable objectives. Their achievement is reviewed on a semi-annual basis by the Head of UBS in Society, and on an annual basis by the Corporate Culture and Responsibility Committee.

Progress made in implementing UBS in Society's strategy, commitment, and objectives is reported as part of UBS's annual reporting. This reporting is reviewed and assured externally according to the requirements of the Global Reporting Initiative's (GRI) sustainability reporting guideline. We also regularly report on the implementation of our climate strategy and follow the recommendations provided by the Financial Stability Board's Task Force on Climate-related Financial Disclosures (TCFD) and externally verify our greenhouse gas reporting according to ISO 14064.

Further information relating to these activities can be found in the Constitutional Document of UBS in Society and the most recent UBS Sustainability Report.

At UBS Asset Management (UBS-AM), the Sustainable and Impact Investing (SI) team is responsible for the strategy and implementation of sustainable investing. The Head of the SI team:

- Has overall responsibility for the SI strategy of UBS-AM.
- Is a member of the UBS in Society Steering Committee. The committee ensures firm-wide execution of the UBS in Society strategy.
- Is responsible for overseeing the implementation of UBS-AM's SI strategy, and reports into the UBS-AM Executive Committee, chaired by Suni Harford, President, UBS-AM.
- Is a member of the UBS Group AG Sustainable Finance Committee

ISP 12.1	PLUS	ISP 12	N/A	PUBLIC	Stewardship policy	2

Describe any additional details related to your stewardship policy elements or your overall stewardship approach.

It is our fiduciary duty to monitor companies' ESG performance, engage with management on identified risks and opportunities and vote consistently at shareholder meetings. Stewardship is embedded in our SI approach as our SI policy highlights. We take an active and holistic approach to stewardship through a clear and structured program that fully aligns with clients' investment beliefs, policies and requirements. It encompasses the integration of ESG factors into four inter-dependent activities: – Investment decision making; – Engagement with corporate management; – Exercise of shareholders rights; and – Advocacy with policy makers and standard setters. When exercising our shareholder rights through proxy voting we act in accordance with our corporate governance principles, which are underpinned by two fundamental objectives: – To act in the best financial interests of our clients to enhance the long-term value of their investments. – To promote best practice in the boardroom. As an investment advisor, we have a strong commercial interest in ensuring that those companies which we invest in on behalf of our clients are successful. In our view, that starts with the Board of Directors.

Where we believe the effectiveness of engagement and the chance of success can be increased, we're willing to work both formally and informally with collective bodies, or to collaborate with other shareholders. By speaking to companies with a unified voice, investors can communicate their views more effectively while allowing the companies to focus on a smaller and more coordinated number of requests from the financial community. Collaboration with peers can bring clear benefits, such as building knowledge and skills, sharing resources and increasing attention from corporate management. However, there is a chance that negotiation and coordination costs might hamper the advantages of collaboration. Therefore, at the outset, we must try to confirm that: – Working with other investors is permitted by law and/or regulation – A general alignment of views and agreement on issues of concern and potential solutions exists – Dialogue will be undertaken privately – We, as an investment firm, have the resources to effectively contribute to the research of, and dialogue with, selected companies. We assess the outcomes of the collaborative engagements we participate in by using the same criteria we apply to our individual engagements. These assessments focus on progress against agreed engagement objectives. Collaborative engagements are not the only channel for us to work with our peers and raise awareness on sustainable investing. We are also active members of industry working groups and advisory committees to advance standard setting on key ESG strategic issues for UBS-AM. We assess the effectiveness of these initiatives through the quality of final deliverables and alignment with our internal positions.

We regard the stewardship of our clients' assets as a core element of our fiduciary responsibilities. For this reason, and in order to maximize the economic value of our clients' investments, UBS-AM's Executive Committee has established the UBS-AM Stewardship Committee. Its role is to provide support to the UBS-AM Executive Committee with regards to all stewardship activities. The Committee is formed under the authority of the Head of Investments, who is accountable to the President of UBS-AM. The Committee is governed by a specific Terms of Reference. This outlines its scope, roles, responsibilities and delegations, as well as reporting and escalation of the Committee's operations to the President of Asset Management and wider UBS business group. The Committee is the executive forum for all relevant legal entities of the traditional business of UBS-AM globally. The stewardship governance structure ensures alignment of our voting and engagement activities with our Stewardship Policy across strategies. It is also supports the imperative for us to send a clear message to companies based on all our holdings across both passive and active positions. The Committee meets on a quarterly basis, with ad-hoc meetings when necessary. It is chaired by the Head of Investments, and its membership comprises: Head of Active Equities, Head of Systematic and Index Investing, Head of Global Institutional Client Coverage, Head of Sustainable and Impact Investing and Head of SI Research. The Stewardship Committee is responsible for: – Oversight of our stewardship strategy across ESG topics – Reviewing and approving our Proxy Voting Policy annually, including any updates as required and / or changes to scope of country coverage – Reviewing and approving membership of any organization or collaborative efforts with other investors in relation to ESG/Stewardship – Approving all proposed proxy voting decisions which deviate from UBS Proxy Voting Policy guidelines – Reviewing and determining voting decisions where a consensus has not been reached among our portfolio management teams – Reviewing and approving requests to participate in the filing of a shareholder resolution – Reviewing and approving requests to escalate our engagement activities through letters to the Board, AGM statement and/or public communications

(C) Example 3

a) Internally (or service provider) led

c) Both managing ESG risks and delivering outcomes

(A) Example 1

ESG topics addressed: Strategy and business model, capital management, transparency and disclosure, environmental management and climate change

Eni UBS-AM has been engaging with the company within Climate Action 100+ as a lead investor together with another investment manager since 2018. The dialogue with management has focused on: – The company’s decarbonization strategy, – Capital expenditure in fossil fuels extraction and renewables, scenario analysis, GHG emissions reduction targets, – The link of executive remuneration with climate goals and – Lobbying activities in support of the Paris Agreement. We have interacted with the CEO, CFO, the chair of the remuneration committee, the sustainability and the IR department.

As part of the dialogue, we have submitted an AGM statement for the board’s consideration to acknowledge the progress made and encourage the company to keep its commitments, even during the challenging times of the COVID-19 pandemic. Outcomes and next steps At the beginning of 2020, the company announced new ambitious targets, including an 80% reduction in net scope 1, 2 and 3 emissions by 2050, with reference to the entire life-cycle of the energy products sold and a 55% reduction in emission intensity compared to 2018. This is in addition to previous commitments to achieve net-zero carbon footprint by 2030 for scope 1 and 2 emissions from upstream activities and net-zero carbon footprint for total scope 1 and 2 emissions by 2040.

During the year, the long-term incentive plan of the company has also been modified to include a new ESG objective with a 35% weight. The company has also published its principles to define the company's public policy positions on climate change and assess its participation in trade associations. Finally, the company has reviewed its oil and gas price assumptions and defined a flexible decline in oil production from 2025 together with ramping up its commitments in renewables and the circular economy..

Takeda Pharmaceutical Company
We took the lead in engaging with Takeda on their Access to Medicine (AtM) Strategy, as part of the Access to Medicine Foundation's collaborative engagement initiative. The foundation launched a long-term engagement project and publishes index results every two years. This index is a building block for tracking pharmaceutical company progress towards SDG 3 by 2030. We identified the following issues for engagement:

- The expansion of their equitable pricing strategies
- Project specific access plans for late-stage projects
- Enhancing transparency in relation to filling for market approvals
- Impact measurement conducted, including the integration of Shire within their Access to Medicine strategy, following Takeda's acquisition of the company in 2019.

(B) Example 2

ESG topics addressed: Community impact and human rights, strategy and business model, transparency and disclosure

We have held two meetings with the company to progress the engagement. The first took place at our offices in London while the second meeting took place over the phone (considering COVID-19 travel restrictions). We met with eight company representatives including ESG experts, the corporate secretary and other individuals involved in the Access to Medicine strategy. We had a positive dialogue with the team and are confident that Takeda continues to progress in its strategy to access to medicines.

Outcomes and next steps
Takeda has progressed on all engagement areas.

It covers a large number of innovative medicines with its equity pricing strategies, having launched an initiative to ensure a systematic process is used for all late-stage projects to provide access plans and enhancements in relation to filing market approvals; noting that this is taking more time than they would have liked, considering the Shire integration. We were also pleased to learn about the company's collaboration with Duke University to create an Access to Health Impact Measurement Framework. This model is being designed not just to measure the direct impact to patients but also to monitor the difference programs are making to the healthcare system more broadly. Takeda is seeking to set an industry standard and is collaborating with peers and governments in doing so. The company has disclosed that in 2019, 125,000 patients were supported with treatments to improve and extend lives, 4,000+ healthcare providers were trained and 1.1 million patients screened, as part of Takeda's holistic Access to Medicine approach..

Rio Tinto
Controversy emerged at Rio Tinto in the middle of 2020 when the company's Australian iron ore mining activities resulted in the destruction of cultural heritage at Juukan Gorge. We have spoken with the company directly and as part of a multi-investor engagement.

(C) Example 3

Community impact and human rights, environmental management and climate change

Rio Tinto's board review and an Australian parliamentary inquiry demonstrates a lack of coordination between internal parties on mining activity and the presence of cultural heritage. The structure of teams addressing key social themes, and weaknesses in stakeholder management contributed to the incident.

Outcomes and next steps
 Rio Tinto has responded with action, including a review all of its mine sites, placing cultural heritage into its line management controls, implementing a new Integrated Heritage Management Plan, and establishing a centralized Social Performance function.

It is also reviewing its existing agreements with Traditional Owners and Indigenous Peoples and is embarking on a process of updating the language where needed. We will continue to engage with Rio Tinto on its response to this incident, its management of cultural heritage across the company, and its work on a ensuring a more inclusive management of its activities..

ISP 23.1	CORE	ISP 23	N/A	PUBLIC	Engaging policymakers	2

What methods do you, or the external investment managers or service providers acting on your behalf, use to engage with policymakers for a more sustainable financial system?

(A) We participate in "sign-on" letters on ESG policy topics. Describe:

As part of our engagement with the South Korea Electric Power Corp in 2020 we have co-signed a private letter to the board of the company, a public letter to the South Korean Ministry of Economy and Finance (a major shareholder in the company) and a media article to express our concerns.

(B) We respond to policy consultations on ESG policy topics. Describe:

Our goal is to promote best practice industry standards by contributing to the development of regulatory standards and guidelines and employing progressive and innovative solutions to meet those standards.

(C) We provide technical input on ESG policy change. Describe:

UBS-AM is part of the UK Investment Association (IA) Working Group on climate change.

(D) We proactively engage financial regulators on financial regulatory topics regarding ESG integration, stewardship, disclosure or similar. Describe:

As a large scale global asset manager we have a role to play in representing the views of the investment community on matters of policy and standards generally. Given the speed with which regulation and policy is developing in many parts of the world, we regard dialogue with policy makers and standard setters as part of our fiduciary role, which allows us to do the best by our clients and represent their interests. UBS AM has a well-established dedicated policy team which leads the firm's global engagement with policymakers and standard setters directly and through our trade associations (such as the IA and EFAMA).

(E) We proactively engage regulators and policymakers on other policy topics. Describe:

As a large scale global asset manager we have a role to play in representing the views of the investment community on matters of policy and standards generally. Given the speed with which regulation and policy is developing in many parts of the world, we regard dialogue with policy makers and standard setters as part of our fiduciary role, which allows us to do the best by our clients and represent their interests. UBS AM has a well-established dedicated policy team which leads the firm's global engagement with policymakers and standard setters directly and through our trade associations (such as the IA and EFAMA).

(F) Other methods used to engage with policymakers. Describe:

Additional updates on our work with standard setters and other investors can be found in our 2020 Stewardship Report.

UBS Asset Management has a well-established dedicated policy team which leads AM's global engagement with policymakers (referred to as 'Regulatory Intelligence').

At UBS, we also benefit from Group wide governance (which includes our other divisions, Wealth Management and Investment Banking). UBS has an internal committee, the Sustainable Finance Regulatory Policy Network (Network), which coordinates the Group's sustainability related discussions that are on the regulatory policy agenda. The Network formulates the positions that we take, as a Group, to our policy and industry engagements that relate to political and regulatory matters. The Network is chaired by UBS's Head of Sustainability Regulatory Strategy. Asset Management is represented by the Head of Sustainable & Impact Investing and the Head of Regulatory Intelligence.

The Network reports to the UBS in Society Steering Committee, the Sustainable Finance Steering Committee and the Global Environmental and Social Risk Committee. In turn, these committees may escalate to the Global Executive Board (GEB), the Group CEO or the Corporate Culture and Responsibility Committee. The Sustainable Finance Steering Committee is chaired by the Group CEO's Senior Sustainable Finance Advisor.

The AM CEO sponsors sustainability topics at the GEB (and meets with policy makers including, recently, Mark Carney promoting net zero initiatives for COP 26). Other governance processes within the AM division are managed by the Regulatory Intelligence team. Our policy priorities are identified annually and sustainability is a top priority. Our policy positions represent AM and the wider group view. Regulatory Intelligence is responsible for maintaining relationships with appropriate third parties for policy activities which includes determining which trade associations to engage with. Periodically, reports are made on our policy activities to appropriate bodies including the Network, the AM Regulatory Board and other relevant committees.

- (B) No, we do not have these governance processes in place. Please explain why not:

Governance

General

Our climate strategy is overseen by the Board of Directors' (BoD) Corporate Culture and Responsibility Committee (CCRC), as embedded in the Organization Regulations of UBS Group AG. Within the parameters set by the CCRC, the UBS in Society Steering Committee ensures firm-wide execution of the climate strategy while our firm's climate-related risk appetite is set at the Group Executive Board level. In joint meetings, the BoD's CCRC and Risk Committee regularly and critically review the assessments and steps taken by these management bodies toward executing our climate strategy. The CCRC approves UBS's annual climate-related objectives and oversees the progressive alignment of our climate disclosure with the TCFD recommendations. These annual plans and objectives are managed as part of our ISO 14001-certified environmental management system (EMS), with defined management accountabilities across the firm. The EMS helps us to systematically reduce environmental risks, seize market opportunities and continuously improve our environmental and climate performance and resource efficiency.

The physical and transition risks from a changing climate contribute to a structural change across economies and therefore affect banks and the financial sector as a whole. In order to protect our clients' and our own assets from climate-related risks, we continue to drive the integration of climate-related risk into our standard risk management framework. UBS manages climate risks in our own operations, balance sheet, client assets and supply chain. We are embedding climate risk into the UBS risk appetite framework and operational risk appetite statement. In 2020, we further integrated climate risk in risk identification, management stress testing methodology and reporting processes across the organization. We have consistently reduced our exposure to carbon-related assets and continued our multi-year efforts to develop methodologies that enable more robust and transparent disclosure of climate metrics. This work will continue our efforts to ensure we are prepared to respond to increased regulatory requirements on climate risk, are aligning our disclosure with the TCFD recommendations and collaborate within the industry to close gaps. In 2020, we also refined our ability to estimate the firm's vulnerability to climate-related risks using forward-looking scenario-based approaches, and developed a climate transition risk heatmap.

UBS-AM's Sustainable and Impact Investing ("SI") Management Committee is responsible for oversight of UBS-AM's Sustainable Investment policy, of which climate considerations are an integral part. . Michael Baldinger, Head of the SI Team, chairs the UBS-AM SI Management Committee, which has influence across the research, investment and client coverage business segments and oversees the implementation of our Sustainable Investing policy. Members of the SI Management Committee include senior representatives from each of the main investment capabilities as well as from key client servicing regions. The Committee reports into the UBS-AM Executive Committee, chaired by Suni Harford, President, UBS-AM.

In addition, Michael Baldinger is a member of UBS' Sustainability Operating Committee, which is responsible for steering the overall UBS Group SI strategy. The Committee reports into the Corporate Culture and Responsibility Committee, chaired by Axel A. Weber, Chairman, UBS AG.

The UBS-AM SI team has responsibility for the implementation of our Sustainable Investing policy and procedures and annually reviews our responsible investment objectives and establishes goals for the coming year.

Among our client groups, awareness of sustainability is rapidly growing. Sustainability is also helping to define our role in society, our corporate strategy and how we think about financial solutions overall.

Over recent years, clients have been making a shift in favor of investments that focus on, or more actively take into account, material environmental, social and governance (ESG) factors. This shift is not isolated to individual institutional investors and private clients – corporate clients are transforming their operations to aim for ESG best practice and aligning their business models to the UN Sustainable Development Goals (SDGs). The COVID-19 crisis has accelerated and solidified this trend by highlighting the consequences of not addressing challenges we are well aware of (such as climate change or social inequalities) as well as the interconnectedness of our world.

Our own research provides evidence of this shift. A global UBS Asset Management survey of 600 institutional investors found that European asset owner respondents predict that systemic environmental factors (i.e., climate crisis, biodiversity loss, etc.) will, in the next five years, be more material to their investments than financial factors.¹ Another survey showed that, among Swiss institutional investors, 49% of respondents have already invested sustainably, and out of these, two-thirds plan to increase their share of sustainable investing (SI).² In a UBS Investment Bank survey, 68% of corporate clients are considering or currently revising their sustainability strategy. And 70% stated they are considering including ESG targets as part of their compensation framework.³ In our Personal & Corporate Banking business, the newly introduced sustainability-linked loans are experiencing strong demand. And in the private wealth space, the majority of our clients believe SI will become the norm in the next decade.⁴

In terms of actual market movements, as of December 2020, global assets in sustainable funds had risen from around USD 600 billion at the end of 2018 to more than USD 1.65 trillion.⁵ If current growth rates persist, ESG mutual fund assets in the US alone are projected to grow from just over USD 150 billion at the end of 2019 to more than USD 300 billion at the end of 2021.⁶ In Europe, ESG assets under management are predicted to triple between 2019 and 2025, to reach EUR 5.5 trillion.⁷

Client surveys not only gather evidence to support trends, they also tell us what is most important to our clients, which helps us ensure we support them in the right way.

To help in understanding trends, we share our knowledge and shed light on challenges that resonate strongly with our clients. We publish regular white papers on challenges and opportunities within SI, review key sustainability developments and provide associated investment solutions across public and private markets. Our research and insights have a strong sustainable component, but venture beyond pure sustainability considerations.

1 Survey conducted in June 2019 among 600 institutional clients (ESG: Do you or Don't you, UBS Asset Management and Responsible Investor)

As a global financial institution, it's our responsibility to help clients navigate the transition to a low-carbon economy. We help our clients assess, manage and protect their assets from climate-related risks by offering innovative products and services in investment, financing and research. In 2020, we launched a suite of new strategies based on our award-winning passive equity Climate Aware strategy. It includes both active and passive equity and fixed income approaches. They help clients reduce their portfolios' carbon footprint in line with their sustainability goals while meeting their financial objectives. Our SI analysts also work with portfolio managers to assess and manage climate-related risks where these are material to the investment case, using climate-related information to understand the consequences for company business model, revenues, costs and capital requirements.

In addition, UBS-AM has developed the capability for portfolio managers to examine the carbon footprint of their portfolios and compare the relative carbon footprints of their company holdings to that of the benchmark. We can calculate the carbon footprint of the majority of our equity portfolios based on greenhouse gas (GHG) emissions data from a third-party data provider (MSCI).

We engage with companies we invest in to discuss approaches to mitigating climate-related risk. We actively vote on shareholder resolutions to improve transparency and disclosure around climate-related reporting. Specifically in the context of our Climate Aware strategy, we have implemented an engagement program with 49 oil and gas companies as well as utilities companies underweighted in the strategy, aimed at improving disclosure and performance alignment with the TCFD recommendations. Results of the quantitative and qualitative assessments included in the fund methodology are shared with investee companies, aiding the verification of company performance. It also means we can collect feedback, explicitly communicate objectives for change in corporate practices and further enhance the model used to inform the under-/overweights in the strategy.

- In 2020, we continued our multi-year efforts to develop methodologies that enable more robust and transparent disclosure of climate metrics. This includes the development of a novel transition risk heatmap methodology, improved granularity and accuracy of climate-sensitive sectors and carbon-related assets disclosure and expansion of the weighted carbon intensity metric. The climate-sensitive inventory now applies to sectors captured by the transition risk heatmap. Following the enhanced methodology, our exposure to climate-sensitive sectors has remained relatively static – lending to high-risk sectors has been reduced and lending to low-risk sectors has increased. UBS exposure to carbon-related assets was revised to analyze underlying commodities in our commodity trade finance business. We have recalculated all previous years' exposure figures using the enhanced approach. In 2020, we have again reduced our exposure to high-carbon sectors (as defined by the TCFD and those rated higher risk on the heatmap) to 1.9%, down from 2.3 % in 2019 (and 2.8% in 2018). The weighted carbon intensity of our Climate Aware strategies went down to 68.2 tonnes carbon dioxide equivalent (CO₂e) per USD million of revenue (from 74.5 tonnes in 2019). This is 51% less when compared against the weighted carbon intensity of the composite benchmark. Climate-related sustainable investments increased to USD 160.8 billion, up from USD 108 billion in the previous year. At the end of 2020, we reached our goal of using 100% renewable energy and reduced our firm's own GHG emissions by 79% compared to baseline year 2004. Please refer to p.41 of the UBS Sustainability Report 2020 for an overview of UBS Group's climate-related metrics 2020. The UBS Sustainability Report 2020 is available via the following link:
https://www.ubs.com/global/en/ubs-society/our-documents/_jcr_content/mainpar/toplevelgrid/col1/tabteaser/innergrid_1976054452_651975952/xcol1/teaser/linklist/link.0396290292.file/bGluay9wYXR0PS9jb250ZW50L2RhbS91YnMvZ2xvYmFsL3Vic1zb2NpZXR5LzIwMjAvdWJzLXN1c3RhaW5hYmlsaXR5LXJlcG9ydC0yMDIwLnBkZg==/ubs-sustainability-report-2020.pdf

- The transition to a low-carbon economy poses both risks and opportunities for the economy and our clients. As such we believed we have a fiduciary duty to address those issues. With regard to current progress on climate action, there is a recognized climate finance and investment gap to meet the low-carbon transition targets. We also see a clear investor appetite for directing capital toward a low-carbon future.

Our climate strategy underpins our commitment to support our clients in preparing for an increasingly carbon-constrained world. It underlines our commitment to the Sustainable Development Goals (SDGs) on climate action and on affordable and clean energy as well as the Paris Agreement. These key commitments are embedded in the Principles for Responsible Banking (PRB). This global framework specifies the role of banks in supporting a sustainable future and scaling up their contribution to the achievement of both the SDGs and the Paris Agreement.

We have reported on our climate strategy aligned with TCFD recommendations since 2017. We are committed to aligning our climate disclosure within the five-year pathway outlined by the TCFD (until end of 2022) and to collaborating within the industry to close gaps.

-

We publicly support international, collaborative action against climate change. Our Chairman is a signatory to the European Financial Services Round Table's statement in support of a strong, ambitious response to climate change. Our Group CEO is a member of the Alliance of CEO Climate Leaders, an informal network of CEOs convened by the World Economic Forum and committed to climate action. We also continue to support the TCFD development with formal representation in the Task Force since 2016.

Our climate-related achievements have been widely recognized by external experts. CDP, which runs a global disclosure system that enables companies, cities, states and regions to measure and manage their environmental impacts, awarded UBS with Leadership status and a Climate A List rating. In 2020, UBS participated in the Global Association of Risk Professionals (GARP) Climate Risk Survey and was recognized amongst the firms that are currently providing leading practice in climate financial risk management.

In 2020 as part of the UNEP FI TCFD phase II project for banks UBS further developed of climate scenarios, in line with the range of reference scenarios published by the Network for Greening the Financial System (NGFS), progressed development of a heatmap methodology and pilot tested the credit analysis methodology on our oil and gas portfolio and physical risk analysis on our real estate mortgage portfolio. In addition between 2019 and 2020, as part of the Paris Agreement Capital Transition Assessment (PACTA) UBS tested the alignment of its corporate lending portfolios with Paris Agreement benchmarks and conducted PACTA 2020 climate alignment test, studying the climate alignment of Swiss mortgages, direct real estate investments and listed investments portfolios.

(H) The board or the equivalent function does not exercise oversight over climate-related risks and opportunities

ISP 29	CORE	N/A	N/A	PUBLIC	Governance	General
--------	------	-----	-----	--------	------------	---------

The Corporate Culture and Responsibility Committee (CCRC)¹ supports the UBS Board of Directors in its duties to safeguard and advance the Group's reputation for responsible and sustainable conduct. It approves and monitors UBS in Society's (UBS in S) overall strategy and annual objectives, governance, and oversees the program's annual management review. The Group CEO² supervises the execution of the UBS in S strategy and annual objectives. The Group CEO also informs the Group Executive Board (GEB) and Corporate Culture and Responsibility Committee (CCRC) about UBS in S updates as appropriate. The Head UBS in S is UBS's senior level representative for environmental and sustainability issues. Nominated by the Group CEO, they chair the UBS in S Steering Committee, are a member of the Global Environmental Social Risk Committee, and a permanent guest to the CCRC. They develop the UBS in S strategy, leads in its execution, and submits annual objectives to the Group CEO. The UBS in S Steering Committee (SC) ensures firm-wide execution of the UBS in S strategy across business divisions, functions and regions. The Committee is chaired by the Head UBS in S and comprises divisional, regional, and Group COO EC members as well as UBS in S EC members. SC members are responsible to define and implement the sustainability strategy of their BA / Function (and to allocate resources accordingly) in line with the UBS in S strategy. The Global Environmental & Social Risk Committee³ defines an ESR framework and independent controls that align UBS's environmental and social risk appetite with that of UBS in S. It is chaired by the Group Chief Risk Officer, who is responsible for the development and implementation of principles and appropriate independent control frameworks for environmental and social risks within UBS. ¹ Responsibilities and authority of the CCRC are defined in Annex B of the Organization Regulations of UBS Group AG ² As set out in the Group Functions Business Regulations ³ As set out in the Global Environmental and Social Risk Committee Terms of Reference

In 2020, we further integrated climate risk in risk identification, management stress testing methodology and reporting processes across the organization. We have consistently reduced our exposure to carbon-related assets and continued our multi-year efforts to develop methodologies that enable more robust and transparent disclosure of climate metrics, to ensure we are prepared to respond to increased regulatory requirements on climate risk, and are aligning our disclosure with the TCFD recommendations and collaborate within the industry to close gaps.

We have performed both top-down balance sheet stress testing (across the firm), as well as targeted, bottom-up analysis of specific sector exposures covering short-, mid-, and long-term time horizons. These suggested no immediate threat to UBS's balance sheet. However, we identified methodological challenges ranging from the suitability of climate scenarios for banking risk modelling to data availability.

The CCRC approves our annual climate-related objectives and oversees the progressive alignment of our climate disclosure with the TCFD recommendations. These annual plans and objectives are managed as part of our ISO 14001-certified environmental management system (EMS), with defined management accountabilities across the firm. The EMS helps us systematically reduce environmental risks, seize market opportunities and continuously improve our environmental and climate performance and resource efficiency.

To inform the further development of our climate risk management strategy, we have piloted a transition risk heatmap, developed in collaboration with the UNEP FI TCFD working group, taking a materiality-driven approach to further inform our climate risk management strategy. Furthermore, we have been one of the pilot banks testing the PACTA methodology, studying the alignment of select climate-sensitive sectors in our corporate credit portfolio with Paris Agreement benchmarks. Both pilots promote industry learning and have provided guidance for disclosing climate-related risks and opportunities in line with the TCFD recommendations

See details in the UBS Sustainability Report.

We actively engage in education and awareness raising for employees, staff, clients and our local communities on corporate responsibility and sustainability topics and issues. Through employee onboarding, education and broader awareness-raising activities, we ensure that our employees understand their responsibilities in complying with our policies and the importance of our societal commitments.

Better understanding of our firm's sustainability goals and actions is promoted through a wide range of training and awareness-raising activities as well as in our performance management process. For example, in 2020, a specialist training program on environmental and human rights topics (including sustainable finance) was provided to approximately 20,263 employees in front-office and support functions who deal directly with related aspects in every-day business processes.

Our compensation philosophy is to align the interests of our employees with those of our investors and clients. Our Total Reward Principles establish a framework that balances sustainable performance while supporting our growth ambitions, sound governance and appropriate risk-taking, with a focus on conduct and sound risk management practices.

In the performance award pool funding, ESG is reflected through the assessment of risks, such as legal, compliance, reputational and operational risks. Therefore, ESG is taken into consideration when the Compensation Committee assesses not only what results were achieved, but how they were achieved. Achievements versus ESG-related goals are reflected in the qualitative performance assessment and affect the final compensation decision. Our peer-leading position in all workforce- and culture-related criteria in the Dow Jones Sustainability Index underlines our dedication and achievements.

Engagement and voting on climate issues represent one of the most important ways in which we address climate change risks in our portfolios. We believe that to be successful and realize positive change a climate engagement strategy must be focused, oriented around a material framework relevant for both companies and investors, and collaborative in nature.

To create the most effective dialogue within our thematic engagement program on climate change, we have developed a climate materiality assessment and framework to facilitate research and climate engagement dialogue across nine impacted sectors, including the two in focus, oil & gas and utilities. This framework, around which our engagement goals are oriented, is both financially material and well understood by corporate management teams. Specifically, we defined our objectives around the TCFD. We then conducted a detailed scorecard analysis for each company in the focus list in order to identify the most relevant areas of potential improvement, focusing on the core elements of the TCFD.

To maximize both the coherence and effectiveness of our engagements, we pursued our climate engagement strategy through collaboration with other asset owners and asset managers. Specifically, UBS-AM is currently participating in 29 coalitions of investors within the investor initiative Climate Action 100+ (CA100+), leading eight of these groups across regions.

This activity is overseen by UBS-AM'S stewardship committee. Our stewardship governance structure ensures alignment of our voting and engagement activities with our Stewardship Policy across strategies. The Committee meets on a quarterly basis, with ad-hoc meetings when necessary. It is chaired by the Head of Investments, and its membership comprises: Head of Active Equities, Head of Systematic and Index Investing, Head of Global Institutional Client Coverage, Head of Sustainable and Impact Investing and Head of SI Research.

(F) Our management does not have responsibility for assessing and managing climate-related risks and opportunities

ISP 30 CORE N/A Multiple, see guidance PUBLIC Strategy General

- Financial risks associated with climate are considered across all invested asset classes, i.e., equity, fixed income, real estate and infrastructure.
- UBS AM has looked at oil & gas, electric utilities and mining especially from the perspective of stranded assets. This includes our thermal coal exclusion, ESG integration and our engagement activity.
- Raising climate risk issues in dialogue with senior management represents one of the most important mechanisms for translating the integration of climate risks into action with companies. To this end, we are conducting a strategic engagement program with companies in those sectors which have the greatest impact on climate. More specifically, since 2018, we have engaged with 509 companies in the energy and utilities sectors, representing 27% of the total emissions of the FTSE developed world Index.
To create the most effective dialogue within our thematic engagement program on climate change, we have developed a climate materiality assessment and framework to facilitate research and climate engagement dialogue across nine impacted sectors, including the two in focus, oil & gas and utilities.

Climate risks and opportunities have influenced UBS's products and services strategy in the short term (0-3 years) and will continue to influence the strategy in the mid-and long term (3 and 10, 10-80 years). In 2018 and 2019, UBS climate strategy, in response to new banking climate regulation and emerging climate-related risk, was discussed by the Board of Director's Services Risk Committee. UBS climate strategy is now a regular agenda item for the joint meeting of BoD Risk Committee and Corporate Culture and Responsibility Committee (CCRC). 2020 has seen the creation of the cross-firm Sustainable Finance Committee which aims to address commercial aspects of sustainable finance and placing additional emphasis on sustainable finance client solutions across the group. We support our clients' efforts to assess, manage and protect them from climate-related risks by offering innovative products and services in investment, financing and research. We mobilize private and institutional capital towards investments facilitating climate change mitigation and adaptation and in supporting the transition to a low-carbon economy as corporate advisor, and/or with our lending capacity. In 2019, our climate-related sustainable investments rose to \$108 billion from \$87.5 billion at the end of 2018, and the deal value in equity and debt capital market services, and in financial advisory services, related to climate change mitigation and adaptation, rose to \$87.2 billion, from \$56.5 billion in 2018.

We seek to protect our assets by limiting our risk appetite for carbon-related assets and by estimating our firm's vulnerability to climate-related risks using scenario-based stress testing approaches and other forward-looking portfolio analyses. We have reduced carbon-related assets on our balance sheet to 0.8% or USD 1.9 billion as of 31 December 2019, down from 1.6% at the end of 2018 and 2.8% at the end of 2017. In 2018, UBS took a strategic decision to not finance any new coal-fired projects globally, while only financing coal-fired operators that have a strategy to reduce coal dependency along a Paris aligned pathway. This was a substantial strategic decision based upon a scenario-based review of our power portfolio. AM has implemented an engagement program with 50 companies from oil and gas and utilities sectors and we voted on 44 climate-related shareholder resolutions during 2019.

In order to manage our own, and our clients', risk derived from both the physical and transition risks associated with climate change, we have been using scenario-based approaches since 2014. We have performed both top-down balance sheet stress testing (across the firm), as well as targeted, bottom-up analysis of specific sector exposures (in real estate, utilities, and oil & gas) in short (0-3yrs), mid-(3-10 yrs), and long-term horizons (10-80 yrs). Our initial (2014) top-down approach consisted of a scenario-based stress test to assess UBS's balance sheet vulnerability across the firm.

Leveraging our existing firm-wide top-down stress testing methodology, we developed a climate change scenario (which assumes that severe weather events result in governments around the world agreeing to implement carbon pricing mechanisms to assess the impact on financial assets, operational income and physical assets). The scenario anticipated that these mechanisms will prompt a shift away from coal and other fossil fuels to cleaner alternatives and adversely impact markets and gross domestic product. The results showed moderate financial impact in line with other stress scenarios, such as those that foresee an oil shock. Our subsequent (2015) bottom-up analyses of oil and gas utilities as well as electric utilities loan portfolios consisted of a forward-looking analysis to assess impacts of a long-term low fossil fuel price scenario resulting from policies promoting greater use of renewables, enhancing efficiency standards and limiting emissions. We calculated the impact this scenario would have on company probability of default and aggregated company-level results at the portfolio level to assess changes to expected loss. We also assessed the vulnerability of loan portfolios secured by real estate in Switzerland and the US to physical risk by mapping the location of collateral in over 6,000 postal code areas against Swiss Re's CatNet tool, which aggregates a large dataset of observed natural hazards such as wildfire, river and pluvial flooding and tropical cyclones. In 2017, based on historic academic precipitation observations, we conducted Drought stress test (Natural Capital Finance Alliance tool) on UBS's energy portfolio. From both top-down and bottom-up approaches, our internal stress tests suggested no immediate threat to UBS's balance sheet. However, we identified methodological challenges ranging from the suitability of climate scenarios for banking risk modelling to data availability.

(E) Specific sectors and/or assets that are likely to benefit under a range of climate scenarios. Specify:

In 2020, the Investment Bank provided equity or debt capital market services for a total deal value of USD 69.8 billion, or acted as financial advisor for a total deal value of USD 29.1 billion, to clients that contribute to climate change mitigation and adaptation. The methodology behind these numbers consists first in identifying clients who, through the products and services they offer, work to mitigate the effects of global climate change and help to adapt to changing climate impacts.

(G) Other climate-related risks and opportunities identified, please specify:

(H) We have not identified specific climate-related risks and opportunities beyond our organisation's investment time horizon

ISP 32 PLUS N/A N/A PUBLIC Strategy General

As one of the world's largest managers of private and institutional wealth, UBS is keen to help develop solutions in this regard, building on our successful and, in many cases, pioneering work aimed at mobilizing private and institutional capital toward the SDGs. This includes investments that facilitate climate change mitigation and adaptation, notably through our Climate Aware suite of strategies.

Our climate aware framework is built on the methodology that underlies AM's Climate Aware strategy. The main characteristics of the framework are:

- Portfolio mitigation: lowering investment exposures to carbon risk
- Portfolio adaptation: increasing investment exposure to climate-related innovation and solutions
- Portfolio transition: aligning portfolios to an investor's chosen climate glidepath

Portfolio mitigation Based on our experience, maintaining a balance between required investment returns and minimizing climate risks works most effectively when investors integrate climate change considerations into a diversified portfolio. Similar to ESG integration, this is an important element in understanding the specific effects of climate change. As the TCFD has highlighted, these can be viewed as regulatory, market, technology and physical risks. How they play out at the level of markets, industry sectors and individual issuers depends on an interplay of:

regulation; commercial considerations; and impact of technology on business models, revenues, costs and capital requirements.

Integrating these three aspects puts the focus on the most material issues relating to the reduction of emissions generated by the most carbon-intensive sectors. It also leads to a deeper and more investment-relevant understanding of the physical risks.

Portfolio adaptation

Supporting a low-carbon future translates into investing in, and funding of, new technologies and solutions. The key investment areas relate to GHG emissions reduction, energy transition, and energy efficiency. They include companies that manufacture and deploy these technologies as well as the infrastructure and services that make them achievable at scale. There are a variety of developments in business structure, asset ownership, supply chains and delivery models that may be deployed as part of the climate change transition. It is also important to recognize that there are different kinds of investors that are better-placed for certain kinds of investments. Venture capital, private equity, real estate, public equity and public fixed income all have different appetites for technology risk.

Portfolio transition

It is important for investors to understand the difference between where they are now and the possibilities of the climate transition. Scenario analysis is emerging as a response to the uncertainties of climate change. Engagement, meanwhile, provides an opportunity for investors to encourage good corporate practice and, together with voting, keep management accountable for the actions needed to keep pace with the climate transition. It also allows investors to understand the investment dynamics in individual sectors and countries and determine the overall direction of travel. By applying the tools of scenario analysis and engagement, investors are better able to manage the transition to a climate-smart future.

(E) We do not use scenario analysis to assess climate-related investment risks and opportunities

ISP 33.1 PLUS ISP 33 N/A PUBLIC Strategy: Scenario analysis General

We have been using scenario-based approaches since 2014 to assess our exposure to physical and transition risks stemming from climate change. These early in-house scenario analyses have been followed by a series of assessments performed through industry collaborations in order to harmonize approaches in addressing identified methodological and data gaps. In 2018, UBS began a multi-year collaboration with a peer group of up to 35 banks, the UNEP FI, the IAMC, and risk consultancies Oliver Wyman and Acclimatise. Now entering its third iteration, our objective is to develop analytical tools to help banks define and disclose climate-related risks and opportunities, as recommended by the TCFD. This includes developing and standardizing how we quantify climate-related risks, addressing data gaps in the process, including Paris-aligned scenarios, and further refining scenario-based stress-testing methodologies. These advancements aim for banks to more robustly identify and disclose exposure to climate-related risks and opportunities. In 2020, UBS pilot tested the methodology on its 2020 oil and gas (O&G) portfolio. This time, testing against a range of 1.5°C pathways, including an orderly and immediate transition, a disorderly and delayed transition, and a disorderly transition that assumed low reliance on carbon dioxide removals (CDR). The scenarios were developed in partnership with the IAMC and were also the basis for the reference scenarios issued by the Network for Greening the Financial System (NGFS).

To create the most effective dialogue within our thematic engagement program on climate change, we have developed a climate materiality assessment and framework to facilitate research and climate engagement dialogue across nine impacted sectors, including the two in focus, oil & gas and utilities. This framework, around which our engagement goals are oriented, is both financially material and well understood by corporate management teams. Specifically, we defined our objectives around the Taskforce on Climate-related Financial Disclosure (TCFD), an internationally recognized framework for both companies and investors to assess the impact of climate change on business strategy and to report on these impacts in traditional financial disclosures. We then conducted a detailed scorecard analysis for each company in the focus list in order to identify the most relevant areas of potential improvement, focusing on the core elements of the TCFD. These are: – Governance of climate change – Risk management – Strategy and policy – Metrics and performance – Targets – Lobbying activities – Overall level of disclosure

- (F) Other risk management processes in place, please describe:
- (G) We do not have any risk management processes in place to identify and assess climate-related risks

ISP 35	PLUS	Multiple, see guidance	N/A	PUBLIC	Risk management	General
--------	------	------------------------	-----	--------	-----------------	---------

Engagement and voting on climate issues represent one of the most important ways in which we address climate change risks in our portfolios. For active strategies, engagement can inform our forward-looking fundamental understanding of the steps companies' management teams are taking to address climate change in their business models and risk management systems. For passive investments, corporate dialogue can address large negative externalities that impact the environment, the wider economy, and thereby index returns in the long term. We believe that to be successful and realize positive change a climate engagement strategy must be focused, oriented around a material framework relevant for both companies and investors, and collaborative in nature.

Raising climate risk issues in dialogue with senior management represents one of the most important mechanisms for translating the integration of climate risks into action with companies. To this end, we are conducting a strategic engagement program with companies in those sectors which have the greatest impact on climate. More specifically, since 2018, we have engaged with 509 companies in the energy and utilities sectors, representing 27% of the total emissions of the FTSE developed world Index.

Our dialogue with management is complemented by our voting decisions on climate issues. We are generally supportive of climate change resolutions that are reasonable, referring to the TCFD recommendations and aligned with long-term shareholder interest. In line with this, we are supportive of proposals that request:

environmental policies in line with the recommendations of the TCFD framework

– Reporting on the financial and physical risks of climate change on the company’s operations, and/or its response to rising regulatory, competitive, and public pressure to significantly reduce greenhouse gas emissions

– Good governance and risk management of climate change

– Short-, medium- and long-term targets to guide ambition on decarbonization actions

– An effective strategy for addressing key climate change issues and appropriate metrics for links between climate change targets and executive remuneration

In addition to supporting shareholder resolutions on climate, we also use our vote to express discontent at companies which fail to demonstrate adequate progress. We will generally vote against the chair of the board of companies we have engaged with for more than two years without seeing progress on climate change. We see our votes against management as a means to call for greater attention and action. As explained in the proxy voting statistics section, in 2020, we voted against the election of the chair or another board member of four companies in our focus list because of lack of progress on engagement focused on climate change.

(E) In the asset class benchmark selection process. Describe:

Climate-related risks are assessed as part of our overall integration process. We have conducted a materiality analysis of climate risks across industries, and climate change issues are included in the overall analysis process for ESG integration.

(G) Other investment process(es). Describe:

(H) We are not tracking and managing climate-related risks in specific investment processes

ISP 36	PLUS	N/A	N/A	PUBLIC	Risk management	General
--------	------	-----	-----	--------	-----------------	---------

UBS has an Environmental and Social Risk Policy to identify and manage potential adverse impacts to the environment and to human rights, as well as the associated environmental and social risks our clients' and our own assets are exposed to, including climate-related risks. The Policy sets out requirements and standards for identification, assessment, approval, escalation, monitoring and reporting of environmental and social risks including climate-related risks. It specifies roles and responsibilities in client onboarding, transaction due diligence, product development and investment decision processes, and supply chain management:

- The Business (1st line of defense) identifies the risks and refers them to the ESR unit
- The ESR unit (2nd line of defense) determines whether the referrals are in accordance with the firm's ESR standards and risk appetite.

In order to protect our clients' and our own assets from climate-related risks, we continue to drive the integration of climate-related risk into our standard risk management framework. UBS manages climate risks in our own operations, balance sheet, client assets and supply chain. We are embedding climate risk into the UBS risk appetite framework and operational risk appetite statement. In 2020, we further integrated climate risk in risk identification, management stress testing methodology and reporting processes across the organization.

UBS has “provided leading practice in climate financial risk management” (to quote the Global Association of Risk Professionals (GARP) Climate Risk Survey 2020) by, among other achievements, disclosing the exposure to climate sensitive sectors since 2019. The 2020 disclosure on ‘UBS corporate lending to climate-sensitive sectors’ covers banking products across the Investment Bank and Personal & Corporate Banking divisions (page 13 of Our climate strategy) In 2020, UBS piloted a transition risk heatmap, developed in collaboration with the UNEP FI TCFD working group. The heatmap enables UBS to take a materiality-driven approach to further inform its climate risk management strategy by:

- Helping to identify concentrations of exposure with high climate risk vulnerability, which, in turn, enables resource prioritization for detailed bottom-up risk analysis;
- Supporting a client-centric strategy that prioritizes clients who may benefit from UBS products and services in support of their transition strategies; and by
- providing decision-useful information in internal reports to executive and board leadership and external disclosure to stakeholders.

The next steps for UBS are to pilot the physical risk heatmap methodology, also developed with the UNEP FI TCFD working group, and to examine the applicability of the heatmap methodology in other traditional risk categories. Climate scenario/risk analysis is a novel area of research, and we expect the methodologies, tools and data availability to evolve and improve over time.

ESG objectives are considered in the compensation determination process in objective setting, performance award pool funding, performance assessment and compensation decisions. At the beginning of the year, objectives related to Group, business divisions, Pillars, Principles and Behaviors are set. ESG-related objectives have been embedded in our Pillars and Principles since they were established in 2011. This long-term focus on ESG topics is reflected in the achievements outlined above. To maintain the focus on these important ESG topics, our Group CEO and other GEB members have specific ESG-aligned goals under Pillars and Principles, including governance and risk management, talent management and diversity, client satisfaction, and corporate responsibility. These include goals for reducing our carbon footprint and corporate waste, as well as for progressing our philanthropic efforts. Therefore, achievements versus ESG-related goals are part of the qualitative performance assessments and affect final compensation decisions. In the performance award pool funding, ESG is reflected through the qualitative assessment of legal, compliance, reputational and operational risks, as well as regulatory compliance. Therefore, ESG is taken into consideration when the Compensation Committee assesses not only what results were achieved but also how they were achieved.

(F) Climate risks are included in the enterprise risk management system. Describe:

UBS manages climate risks in our own operations, balance sheet, client assets and supply chain. We are embedding climate risk into the UBS risk appetite framework and operational risk appetite statement. In 2020, we further integrated climate risk in risk identification and reporting processes across the organization. In 2020, we further integrated climate risk in risk identification, measurement and reporting. We increased the coverage of accounts with carbon calculation allowing comparison of fund carbon exposure to benchmark exposure to identify material climate risk. We started analyzing climate scenario analysis and climate stress testing to enhance the current risk management tools. We are also looking at using additional risk metrics to complement carbon metrics information. UBS also uses forward looking climate data points to derive carbon footprint trends and temperature implied metrics principally for its Climate Aware Product.

(H) Processes for identifying, assessing and managing climate-related risks are not integrated into our overall risk management

Sustainability outcomes

Set policies on sustainability outcomes

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 40	CORE	ISP 1.1	N/A	PUBLIC	Set policies on sustainability outcomes	1, 2

Where is your approach to sustainability outcomes set out? Your policy/guideline may be a standalone document or part of a wider responsible investment policy.

- (A) Our approach to sustainability outcomes is set out in our responsible investment policy
- (B) Our approach to sustainability outcomes is set out in our exclusion policy
- (C) Our approach to sustainability outcomes is set out in our stewardship policy
- (D) Our approach to sustainability outcomes is set out in asset class-specific investment guidelines
- (E) Our approach to sustainability outcomes is set out in separate guidelines on specific outcomes (e.g. the SDGs, climate or human rights)

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 41	CORE	ISP 1.1	N/A	PUBLIC	Set policies on sustainability outcomes	1, 2

Which global or regionally recognised frameworks do your policies and guidelines on sustainability outcomes refer to?

- (A) The SDG goals and targets
- (B) The Paris Agreement
- (C) The UN Guiding Principles on Business and Human Rights
- (D) The OECD Guidelines for Multinational Enterprises, including guidance on Responsible Business Conduct for Institutional Investors
- (E) Other frameworks, please specify:
 - UN Principles for Responsible Banking
- (F) Other frameworks, please specify:

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 42	PLUS	ISP 1.1	N/A	PUBLIC	Set policies on sustainability outcomes	1, 2

What are the main reasons that your organisation has established policies or guidelines on sustainability outcomes? Select a maximum of three options.

- (A) Because we understand which potential financial risks and opportunities are likely to exist in (and during the transition to) an SDG-aligned world
- (B) Because we see it as a way to identify opportunities, such as through changes to business models, across supply chains and through new and expanded products and services
- (C) Because we want to prepare for and respond to legal and regulatory developments, including those that may lead to stranded assets
- (D) Because we want to protect our reputation and licence-to-operate (i.e. the trust of beneficiaries, clients and other stakeholders), particularly in the event of negative sustainability outcomes from investments
- (E) Because we want to meet institutional commitments on global goals (including those based on client or beneficiaries' preferences), and communicate on progress towards meeting those objectives
- (F) Because we consider materiality over longer time horizons to include transition risks, tail risks, financial system risks and similar
- (G) Because we want to minimise negative sustainability outcomes and increase positive sustainability outcomes of investments

Identify sustainability outcomes

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle

How has your organisation determined your most important sustainability outcome objectives?

- (A) Identifying sustainability outcomes that are closely linked to our core investment activities
- (B) Consulting with key clients and/or beneficiaries to align with their priorities
- (C) Assessing the potential severity (e.g. probability and amplitude) of specific negative outcomes over different timeframes
- (D) Focusing on the potential for systemic impacts (e.g. due to high level of interconnectedness with other global challenges)
- (E) Evaluating the potential for certain outcome objectives to act as a catalyst/enabler to achieve a broad range of goals (e.g. gender or education)
- (F) Analysing the input from different stakeholders (e.g. affected communities, civil society or similar)
- (G) Understanding the geographical relevance of specific sustainability outcome objectives
- (H) Other method, please specify:
- (I) We have not yet determined our most important sustainability outcome objectives

Transparency & Confidence-Building Measures

Information disclosed – ESG assets

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 46	CORE	OO 16	N/A	PUBLIC	Information disclosed – ESG assets	6

For the majority of your ESG/sustainability marketed funds or products, and/or your ESG/RI certified or labelled assets, what information about your ESG approach do you (or the external investment managers/service providers acting on your behalf) include in material shared with clients, beneficiaries and/or the public? The material may be marketing material, information targeted towards existing or prospective clients or information for beneficiaries.

- (A) A commitment to responsible investment (e.g. that we are a PRI signatory)
- (B) Industry-specific and asset class-specific standards that we align with (e.g. TCFD, or GRESB for property and infrastructure)
- (C) Our responsible investment policy (at minimum a summary of our high-level approach)
- (D) A description of our investment process and how ESG is considered
- (E) ESG objectives of individual funds
- (F) Information about the ESG benchmark(s) that we use to measure fund performance

- (G) Our stewardship approach
- (H) A description of the ESG criteria applied (e.g. sectors, products, activities, ratings and similar)
- (I) The thresholds for the ESG criteria applied in our investment decisions or universe construction
- (J) A list of our main investments and holdings
- (K) ESG case study/example from existing fund(s)
- (L) We do not include our approach to ESG in material shared with clients/beneficiaries/the public for the majority of our ESG/sustainability marketed funds or products, and/or our ESG/RI certified or labelled assets

Information disclosed – Passive ESG assets

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 47	CORE	Multiple, see guidance	N/A	PUBLIC	Information disclosed – Passive ESG assets	6

For the majority of your ESG/sustainability marketed funds or products, and/or your ESG/RI certified or labelled assets that are passive listed equity and/or passive fixed income, how do you communicate changes in their ESG benchmark selection and construction?

- (A) We disclose details that would allow external parties to replicate or test the ESG index or benchmark
- (B) We disclose the main sources of ESG data, broad ESG assumptions and how this is used to develop ESG passive portfolios
- (C) We disclose a full list of all changes to methodologies
- (D) We disclose any changes that we deem significant to the methodology
- (E) We do not communicate changes to methodologies for the majority of our ESG/sustainability marketed funds or products, and/or our ESG/RI certified or labelled assets that use ESG indices/benchmarks

Client reporting – ESG assets

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle
ISP 48	CORE	Multiple, see guidance	N/A	PUBLIC	Client reporting – ESG assets	6

What ESG information is included in your client reporting for the majority of your ESG/sustainability marketed funds or products, and/or your ESG/RI certified or labelled assets?

- (A) Qualitative analysis, descriptive examples or case studies
- (B) Quantitative analysis or key performance indicators (KPIs) related to ESG performance
- (C) Progress on our sustainability outcome objectives
- (D) Stewardship results
- (E) Information on ESG incidents, where applicable
- (F) Analysis of ESG contribution to portfolio financial performance
- (G) We do not include ESG information in client reporting for the majority of our ESG/sustainability marketed funds or products, and/or our ESG/RI certified or labelled assets

Information disclosed – All assets

Indicator	Type of indicator	Dependent on	Gateway to	Disclosure	Subsection	PRI Principle

We regard the stewardship of our clients' assets as a core element of our fiduciary responsibilities. For this reason, and in order to maximize the economic value of our clients' investments, UBS-AM's Executive Committee has established the UBS-AM Stewardship Committee. Its role is to provide support to the UBS-AM Executive Committee with regards to all stewardship activities. The Committee is formed under the authority of the Head of Investments, who is accountable to the President of UBS-AM. The Committee is governed by a specific Terms of Reference. This outlines its scope, roles, responsibilities and delegations, as well as reporting and escalation of the Committee's operations to the President of Asset Management and wider UBS business group. The Committee is the executive forum for all relevant legal entities of the traditional business of UBS-AM globally.

The stewardship governance structure ensures alignment of our voting and engagement activities with our Stewardship Policy across strategies. It is also supports the imperative for us to send a clear message to companies based on all our holdings across both passive and active positions.

The Committee meets on a quarterly basis, with ad-hoc meetings when necessary. It is chaired by the Head of Investments, and its membership comprises: Head of Active Equities, Head of Systematic and Index Investing, Head of Global Institutional Client Coverage, Head of Sustainable and Impact Investing and Head of SI Research.

The Stewardship Committee is responsible for:

- Oversight of our stewardship strategy across ESG topics
- Reviewing and approving our Proxy Voting Policy annually, including any updates as required and / or changes to scope of country coverage
- Reviewing and approving membership of any organization or collaborative efforts with other investors in relation to ESG/Stewardship
- Approving all proposed proxy voting decisions which deviate from UBS Proxy Voting Policy guidelines
- Reviewing and determining

------	------	-------	-----	--------	---	---

One of UBS-AM's largest strategies employing our rigorous process of ESG risk assessment, analysis and engagement is the Global Equity Concentrated Alpha Strategy. Integral to this strategy, managed by the Global Equity Concentrated Alpha team, is a three circle assessment which combines fundamental qualitative and quantitative signals. Among its aims are the limitation of downside through risk assessment and the optimization of upside opportunities through engagement.

The UBS ESG Risk Dashboard, a proprietary ESG monitoring tool, serves as the starting point for ESG integration. The Dashboard allows equity analysts to quickly identify companies with significant ESG risks via the "UBS ESG Risk Signal". This clear, actionable signal serves as starting point for more in-depth analysis of the underlying sources of these risks and the links to their investment cases. The ESG Risk Signal combines data points from a number of reputable external research sources based on a proprietary methodology. It provides a structured, holistic view of ESG risks across four different dimensions, allowing for industry relative comparisons (expressed via the UBS Blended ESG score) as well as the identification of outliers. If one or more pillars fail thresholds set, the issuer is flagged for severe ESG risks by the signal.

For companies that are flagged as high risk the team will collaborate with the UBS-AM Sustainable Research team to understand in more detail the severity of the issue and the ESG risks involved. For a new idea, a stock that flags as high risk is unlikely to be a suitable candidate for the portfolio. However, the team may still invest in the stock if the independent analysis of UBS-AM Sustainable Research team shows that the ESG score is not a true reflection of its ESG profile or if the company demonstrates the willingness and the ability to take meaningful measures to improve. In the event that the ESG profile of a company deteriorates, depending on the analysis and the nature of the sustainability risks, the team will decide whether to sell or to keep the position and engage with the company where possible. At any point in time, ESG related issues can be brought to the team's attention via other types of information sources e.g. in the form of an analyst insight or a news flow. This can prompt the team to take action even before changes in the ESG scores take place.

Through the three circle assessment, the team gains levels of conviction and a good understanding of the potential upside and downside risk of any stock. Exposures to individual securities will depend on the risk vs. reward, liquidity, volatility of cash flows and ESG characteristics. All else equal, a company with a stronger or an improving ESG profile will warrant a larger weight in the portfolio. The team also regularly reviews their reasons for holding a stock. They may reduce the weighting or sell a stock if it has diminishing support from their independent information sources and risk/reward has shifted towards the downside, including on ESG.

The team firmly believes that monitoring, engaging and, where necessary, intervening on matters that may affect the long-term value of investee companies is part of their overall stewardship of their client's assets. This relates to both financial and non-financial metrics including ESG factors. It is generally strong governance that drives corporate behaviour. Engagements are prioritised and undertaken dependent on the circumstances and the issues to be discussed. Where the team has identified an issue with the strategic direction of the company, performance of management or remuneration, they will seek to discuss concerns with the company early in order to minimise the potential loss of shareholder value. However, successful engagement is often not a one-time discussion and can come in various forms, from information gathering to change in company practices. Hence, its effectiveness can often only be judged over a period of time.

LE 7 PLUS OO 10 N/A PUBLIC ESG incorporation in portfolio construction 1

(A) Example 1:

Within Systematic and Index Investments, we have extensive experience and expertise in incorporating sustainability factors in index funds and rules-based strategies, alongside three pillars: replicating third party indices, constructing custom indices in collaboration with clients, consultants, and index providers, and constructing proprietary rules-based strategies. We have carried out and continue to carry out in-depth research and analysis on efficient implementation of ESG factors in rules-based strategies, with specific focus on climate change-related factors. In early 2017, following extensive quantitative and sustainability research, we launched a Climate Aware rules-based fund in the UK that utilizes our proprietary investment model incorporating a range of qualitative and quantitative climate-related metrics. We subsequently launched a Swiss-domiciled Climate Aware fund and Irish-domicile Climate Aware Tax Transparent fund. The UBS Climate Aware Equity strategy aims to address climate change as a systemic risk and to capitalize on the long-term transition to a low GHG emissions economy by investing more in companies at the heart of this transition, as well as those adapting their operating models. The strategy does not exclude stocks, but instead pursues an active voting and engagement policy with companies that most need to adapt their business models in order to meet globally agreed climate change goals. The Climate Aware strategy applies positive and negative 'tilts' related to climate change aspects, while aiming to deliver returns broadly in line with the underlying market cap weighted global equity index. Our research process comprises four core elements which form a multi-dimensional set of metrics that guide the portfolio construction towards a set of exposures that aim to reflect the transition to a low GHG emission economy and the 2°C scenario.

Our approach is innovative - it is both forward looking and uses a probabilistic framework to capture the inherent uncertainty surrounding carbon data. Our process/model comprises the below four components: 1. Glide path probability: We build a quantitative model that compares the company's carbon footprint trend with the required emission reduction implied by the 2C scenario. This approach allows us to estimate the probability that the company will achieve those glide path targets. 2. Qualitative overlay: We improve the estimates of our quantitative model with a qualitative framework that incorporates information about the company: • whether carbon emission is reported under the Carbon Disclosure Program (CDP) • the company's disclosure related to implementation of policies, objectives and/or initiatives related to carbon efficiency This qualitative data allows us to make a more robust estimate of a company's commitment to carbon reduction. This step is designed to mitigate carbon data quality and reporting issues by introducing related supplemental information on a firm's stated policy. 3.

Current carbon intensity and renewable energy: This relates to current information about direct and indirect carbon footprint (measured as intensity levels). Furthermore, in order to partially capture the substitution of energy sources under the 2C scenario by clean energy providers, they incorporate information related to both the production of renewable energy and companies offering technology to that sector. 4. Fossil fuel reserves and energy produced: This element allows the underweighting of companies generating electricity from coal-fired power stations. We also allow the portfolio to reduce exposure to companies that currently hold proven reserves in coal, oil and gas. We have further established a Climate Aware Advisory Group, to oversee the implementation, structure and progress of the UBS Climate Aware Strategy as well as to review results from our Climate engagement program. This group comprises representatives from UBS-AM and external representatives from clients invested into the strategy. This group meets quarterly to review action points from the previous meetings, and to ensure that the strategy continues to meet its target objectives. Formal minutes are recorded and actions followed up..

(B) Example 2:

Within Systematic and Index Investments, we have extensive experience and expertise in incorporating sustainability factors in index funds and rules-based strategies, alongside three pillars: replicating third party indices, constructing custom indices in collaboration with clients, consultants, and index providers, and constructing proprietary rules-based strategies. We have carried out and continue to carry out in-depth research and analysis on efficient implementation of ESG factors in rules-based strategies, with specific focus on climate change-related factors. As an example, we have highlighted below the different steps involved in the construction process of two ESG tilted equity portfolios that we manage on behalf of a European institutional investor.

Construction process of ESG-tilted portfolios

- MSCI index and ESG data enters our benchmark system Panacea via index vendor RIMES. The index and ESG data then enters our portfolio management system (POP).
- Data is validated via a three-stage check.

An initial check is conducted on receipt of the index data to our Benchmark system Panacea. A second check is run as we process the applicable ESG/SRI factors. Here we check coverage for each metric, changes of data with respect to the previous update and corporate actions. A final data check is performed as the data is entered into our Portfolio Optimisation Platform.

- If we suspect data inaccuracies, we first investigate the matter internally and with our index vendors and if we determine that the suspected inaccuracy stems from the index provider, we escalate the matter with them.

We have strong relationships with all major index providers, including MSCI, FTSE Russell, S&P Dow Jones, and intellectual properties firms such as Research Affiliates, and maintain regular dialogue on index related topics, including latest index research, developments, index consultations, and index cost.

- We use a quantitative process to manipulate the data and calculate the SRI factors/tilts, which then automatically uploads the factors/tilts to POP.
- Using POP, we then run the optimisation process based on the specified parameters and constraints, as follows:
 - An improvement of the overall (weighted average) MSCI ESG score of both the Emerging Markets and Developed Equity portfolios versus their respective benchmark by 1.5 points
 - A structural reduction of the carbon footprint of each portfolio versus its respective benchmark by 20%
 - A structural improvement of the overall Social score of the Emerging Markets Equity portfolio vs. its respective benchmark by 10%
 - A structural improvement of the MSCI ESG scores on Labor Management and Health & Safety of the Developed Markets Equity portfolio versus its respective benchmark each by 10%
 - Exclusions: client exclusions applied
 - Stock +/- 0.75%
 - Sector +/- 2%
 - Industry +/- 2%
 - Country +/- 1%
- Should the underlying data be unavailable from the index providers, our optimisation process will take a conservative approach using the latest available data or rebalance the portfolio such that the missing points do not change the profile of the portfolio significantly.
- After the optimization in POP, the data is validated by our data management group and loaded in POP as the ESG tilted model portfolio to be tracked by your index equity portfolio management team using the same proven investment process and rigorous risk control as we do in managing standard market cap weighted indices..

(A) Example from your active listed equity:

At UBS Asset Management, the assessment of ESG issues is oriented around the UBS ESG Material Issues framework developed by our Sustainable Investment (SI) research analyst team. Sustainability covers a wide range of topics, so financial analysts and portfolio managers need to focus their attention on a set of key factors that could affect a company's financial performance. Our materiality framework identifies the three to five most financially relevant factors per sector that can impact the investment thesis and credit recommendation across 32 different industry sectors.

This helps analysts focus on those sustainability factors most likely to influence investment returns.

Those listed below include the top five ESG criteria across the 32 sectors:

- Environmental: carbon emissions, air quality, toxic emissions & waste, bio-diversity & land use, and water stress
- Social: product safety & quality, labour management, development & culture, privacy & data security, and supply chain
- Governance: business ethics, competitive behaviour, management of the legal & regulatory environment, critical incident risk management, and systemic risk management

The following topics are deemed to have material impacts on the value of investee companies:

- Corporate Governance: a key issue for all corporates reflecting the relationship between the company and investors. Good corporate governance ensures that the interests of shareholders are reflected in the management of the company.
- Human Capital Management and Labour Standards: a key issue for all corporates reflecting the relationship between the company and employees.

Good human capital management ensures that employees are constructively managed, attracted and retained, provided with development opportunities, and reflect societal trends in diversity and inclusion.

- Climate change: a material issue for companies in high carbon intensity value chains. The need for companies to meet increasing demands for decarbonisation has the potential to disrupt business models, impact revenues and costs, and reshape capital allocation as well as competitive position and regulatory costs..

(B) Example from your passive listed equity:

We apply ESG related customisation not only on segregated mandates, but also construct new indices capturing specific themes/factors to be used as benchmarks for our pooled funds and ETFs. As a result of our in-depth research in the sustainable indexing space, we have been instrumental in the development of MSCI SRI indices and have strong relationships and maintain dialogue with index providers and ESG database providers on ESG-related topics. In 2017, we broadened our offering of sustainable ETFs with the launch of funds tracking MSCI ESG Universal indices as well as Solactive Equileap Global Gender Equality 100 Leaders Index, which we developed in collaboration with the index provider.

The index comprises the top 100 stocks globally with the highest gender equality score, as defined by Equileap: companies are ranked on 35 points according to 19 gender criteria. The 19 criteria are grouped in 4 categories: Gender balance in leadership & workforce, Equal compensation & work life balance, Policies promoting gender equality, Commitment to transparency and accountability.

The index construction involves the following steps:

- Liquidity filter: stocks with a 3-month ADV below USD 5 million are removed.
- Securities screening for involvement in controversial activities:
 - o Coal extraction and power generation: exclude companies which derive more than 50% of their revenue
 - o Controversial Businesses: exclude companies which have more than 50% revenue exposure to Gambling, Tobacco Products or Weapon Industry (both Military and Controversial Weapons)
 - o Norms Based Research: exclude companies with verified infringement of established international initiatives and guidelines (such as UN Principles and OECD Guidelines)
- An additional screen based on the data from the Gender Data Provider is performed in order to screen out companies which have engaged in known unethical business practices in the last 2 years.
- All remaining stocks are then ranked according to the Equileap Gender Diversity Score, which is calculated based on 19 gender criteria. In cases where securities have the same score, these are sorted according to their full market capitalization.
- Stock selection: first, the top 30 US listed shares are included in the index, regardless of the Gender Score.

Then the next highest scoring US stocks will be added, but only if they have a score of at least 14, up to maximum 50 US stocks in total. Lastly the highest scoring companies from the rest of the world will be added to total 100 stocks in the index composition, ensuring that no country is represented by more than 10 securities.

- On the annual rebalancing date in September, all index constituents are weighted in the following way:

o The US listed stocks will account for 50% of the entire index weight. Within the country group each stock will be equally weighted.

o The weights of all the other stocks will be equally weighted to account for the other 50% of the index.

Since the UBS ETF (IE) Global Gender Equality UCITS ETF was launched on 19 December 2017, the Solactive Equileap Global Gender Equality 100 Leaders TR Net Index has performed broadly in line with the global developed equity market, returning a 10.81% annualised return in USD compared to 11.34% for the MSCI World TR Net Index..

Within our voting policy guidelines we outline our expectations in regards to corporate governance. Strong governance should, in the long term, lead towards both better corporate performance and improved shareholder value. We expect board members of companies in which we have invested to act in the service of the shareholders, view themselves as stewards of the company, exercise good judgment and practice diligent oversight of the management of the company.

Environmental risks may have a significant impact on the reputation and financial stability of a company. It is essential that the Board has robust policies and processes in place to identify and manage such risks. We expect companies to have a strategy for reducing carbon emissions, to be clear about goals, and to report on progress.

- We may vote in favor of proposals put forward by shareholders that seek to promote good corporate citizenship. Such proposals include sustainability disclosure, human capital management, diversity and supply chain's labor standards. We outline specific requirements in regards to board gender diversity.

-------	------	---------	-----	--------	---------------------------	---

We constantly review and monitor the quality of services provided to us by third parties, both through daily review of the research received and a due diligence process focused on the compliance of policies, controls and procedures and quality of content. As part of our internal oversight process of our proxy vendor ISS, we will select positions on a random basis to audit that the status of each ballot has been confirmed as executed.

Some barriers remain in place which can restrict the flow of information through the intermediary chain. To help drive improvements to proxy voting processes and increase transparency across the investment chain, we have participated in discussions with regulators and market intermediaries on specific initiatives currently under way to review those barriers, including those led by the DWP (Department for Work and Pensions) and the Law Commission in the UK on intermediated securities.

LE 25 PLUS OO 9 LE N/A PUBLIC Example 2

(A) Example 1:

In 2020 we voted on 667 shareholder resolutions which were focused on ESG issues. 50 were related to environmental issues, 171 related to social issues and 400 related to governance issues. Overall, we supported 64% of the total resolutions. In percentage terms, these figures translated to support for: - 88% of shareholder resolutions focused on environmental issues - 68% of shareholder resolutions focused on social issues - 67% focused on governance issues

(B) Example 2:

Climate change is a vital topic for UBS-AM, and we strongly believe it should be embedded in the strategy of any company we invest in. As we consider the board chair to have ultimate responsibility for the definition of company strategy, we have chosen to express our dissent on climate change commitments through a vote against the chair, where we deem the case to be serious and relevant. When the chair was not under election, we voted against a relevant board director. Having strengthened our voting policy in 2020, we elected to vote against the board chair or a board director at the following companies, due to a lack of progress against the objectives for our climate related engagement program:

- Exxon Mobil Corporation,
- Marathon Oil Corporation
- Korea Electric Power Corp
- Power Asset Holdings Limited

(C) Example 3:

Barclays plc – Collaborative engagement leading to voting actions. At the AGM in May, shareholders were presented with 2 resolutions related to the company's climate change strategy. One proposal was put forward by the company, with a further proposal filed by ShareAction. The resolution filed by Barclays outlined an ambition to become a net zero bank by 2050, including the transitioning of its provision of financial services to align with the Paris Agreement. The resolution requisitioned by ShareAction, a UK-based charity focused on responsible investment and co-filed by 11 institutional investors, broadly requested that Barclays commit to phase out the provision of financial services to companies within the energy and utilities sector(s) that are not aligned with the Paris Agreement.

Following extensive direct engagement with both Barclays and ShareAction, and collaborative engagement via the Investor Forum, it was clear that efforts were made by both parties to come to an agreement on the strategy for Barclays in regards to lending practices linked to climate sensitive business activities.

However unfortunately an agreement was not reached and shareholders were therefore required to determine what action they feel is appropriate for Barclays. On balance, we determined that following specific commitments from the company, the ShareAction proposal would not allow Barclays sufficient adaptability and flexibility. We therefore decided to Abstain on the shareholder proposal while supporting the company proposal. While we supported the intent of the ShareAction proposal, we want to allow Barclays the time to sufficiently outline a clear strategy later in 2020, as committed to by the company during our engagement. The company has subsequently published it's strategy in regards to financing of companies linked to climate change, and we are reviewing that information ahead of the 2021 AGM..

(A) Example from your active management strategies:

In terms of an example from our active management strategy, we would like to refer to a case concerning the world's largest protein processor and second largest food company, with a well-diversified and global footprint. With a favourable outlook for the US meat industry, better than expected profitability during the pandemic, and after several liability management exercises, refinancing risk was determined as low. Net leverage of 1.6x is lower than industry average, and improving. The animal protein sector is volatile, cyclical and thin-margin business as well as susceptible to sanitary issues or temporary trade bans. Thus the UBS fundamental view (RFR) was determined as bad. In terms of bottoms up analysis, there were corruption controversies, including the appearance of bribery, executive misconduct and anti-competitive practices.

There were minimal disclosure on anti-corruption controls for employees, despite the creation of independent global compliance department, New Code of Conduct & Ethics, and ethics committees after substantial bribery cases. There were also allegations of downplaying and mishandling COVID-19 threats. In terms of relative value analysis, despite improving credit fundamentals, a potential US listing (positive catalyst) and a good performance of its bonds, we prefer staying on the side-lines due to ongoing headline risk related to previous or new anti-trust probes/corruption scandals, other E.S.G. concerns, for example ties to deforestation, as well as inherent volatility and cyclical nature in the meat packing industry. Given these inputs from research, our portfolio management team decided to underweight the name in their portfolios..

(B) Example from your passive management strategies:

An example of our passive management strategy, within the Automobile Manufacturing industry in Germany, touches on various ESG topics including corporate governance, remuneration, strategy and business model. During our annual meeting with the chair in June 2020, we had an opportunity to discuss the company's strategic evolution in the light of the sectors transformational trends, including digitalization and electrification. SI, listed equity and fixed income analysts joined the meeting. Our aim was to understand the firm's ability to reduce complexity and capital intensity and how the supervisory board is overseeing management decision making in that regard.

In anticipation of the chair succession in 2021, we explained our concerns regarding the company's plans under the former CEO to transition into such role, following a cooling off period of only two years. We reiterated our preference for a truly independent successor. Outcomes and next steps: In December, the company announced a new, independent chair candidate who will be up for election at the 2021 AGM. To inform our proxy voting decision making, we plan to continue our engagement as the company is changing leadership at the supervisory board level..

(A) SSA

We believe that Stewardship extends well beyond the remit of listed equity. As a large scale asset manager whose business spans the investment spectrum, stewardship has relevance across all asset classes in which we operate. The purpose of our stewardship activities in fixed income is to address sustainability issues with a material impact on both companies and external stakeholders.

This allows us to address specific issues negatively impacting the financial case and credit profile, broad issues such as climate change with implications across sectors, and questions arising from UNGC controversies. In 2020 we introduced an engagement question into the template that fixed income credit analysts use to conduct their ESG assessments of companies. This template now allows credit analysts to identify possible engagement opportunities through their ESG integration work by highlighting cases where companies are able to make improvements in their performance which can in turn contribute to the investment case.

We foster discussion between credit and equity analysts because we believe this leads to more effective engagement on sustainability issues.

Often, what is material to a fixed income investor from an ESG perspective is also material to an equity investor. We understand there may be differences in perspective, because fixed income investors focus much more on potential downside risks, and corporate governance and time frames play a different role. In this regard, fixed income and equity investors may disagree on capital allocation (especially between share buybacks and debt reduction) as well as in takeovers and, after a credit event, in bankruptcy settlement. We recognize the need for company management to hear both perspectives, while ensuring that agendas are shared and agreed prior to engagement meetings to ensure alignment on key engagement questions..

INF 13	PLUS	N/A	N/A	PUBLIC	Monitoring	2
--------	------	-----	-----	--------	------------	---

UBS Asset Management and REPM Infrastructure are committed to sustainable investing and managing investments to incorporate ESG considerations at all stages of our funds' lifecycles. As an infrastructure equity investor, managing ESG represents an opportunity in light of the long-term investment horizon of the funds, the significant ownership control and active asset management, and the importance of ESG factors due to the nature of infrastructure assets. The final investment memorandums for prospective assets includes a standard template for screening the ESG aspects of the investment, with a focus on evaluating risks and opportunities. ESG action plans are initially implemented as part of the 100 day action plan. Clearly defined responsibilities and appropriate resources are put in place to execute upon the plans and work with management for continuous improvement over the life of the investment. Monitoring is achieved through regular reporting and board meeting reviews. In accordance with our goals and our commitment to continuous improvement, our latest infrastructure equity fund has been categorized as an Article 8 Fund ("ESG Promotion") under the EU's Sustainable Finance Disclosure Regulation (SFDR). This designation formalizes the strong sustainability positioning of our platform.
